

# Telecommunications Engineering

**STARTING SALARY: \$57,600**  
**MEDIAN INCOME: \$89,630**

Telecommunications is a specialization within electrical engineering that is expected to grow by leaps and bounds. Cellular telephones, palm-pilots, videophones, and wireless communication are everywhere. Satellite signals, microwaves, and fiber-optic trunks are all part of the specialized telecommunications industry.

Communications possibilities that were not dreamed of a few years ago -- video cell phones, online video conferencing, and international broadcasting of concerts, conferences and tutorials -- are transforming the telecommunication field. Teamwork between engineers, software designers, and artists is required to design the devices of tomorrow. Wireless networks are dominating the market and have become as reliable as the fiber-optic lines. Innovative companies will rush to market with products such as wearable computers and components that combine micro-technologies into miniature chip sets. Specialized network equipment for new and innovative applications will become available, and existing network equipment will be upgraded or replaced. Exciting new technologies will create new jobs; the opportunities are only limited by your imagination.

Major communications service providers in the United States that employ telecommunications engineers include AT&T, Bell Companies (Bell-South, Pacific Bell, etc.), Comcast, GTE, Verizon, NTT, Sprint, and TCI. Other large employers, such as Bellcore, Cisco, Ericsson, Lucent Technologies (including Bell Laboratories), Newbridge, Nokia, and Nortel, focus on research and product development. For more information, visit the IEEE website at [www.ieee.org](http://www.ieee.org).

## Job Outlook

Employment of telecommunications engineers, electrical and electronics engineers, is projected to grow 4 percent from 2012 to 2022, slower than the average for all occupations. Job growth is expected because of electrical and electronics engineers' versatility in developing and applying emerging technologies.

## Industries with the highest levels of employment in this occupation:

1. Engineering services
2. Electric power generation, transmission and distribution
3. Navigational, measuring, electromedical, and control instruments manufacturing
4. Semiconductor and other electronic component manufacturing
5. Machinery manufacturing

## Top paying industries for this occupation:

1. Federal government, excluding postal service
2. Semiconductor and other electronic component manufacturing
3. Architectural, engineering, and related services
4. Navigational, measuring, electromedical, and control instruments manufacturing
5. Telecommunications

# **Glossary of Terms**

**Communications** – the ways of sending information to people by using technology (merriam-webster.com)

**Digital** – of or relating to information that is stored in the form of the numbers 0 and 1 (merriam-webster.com)

**Fiber Optics** - the use of thin threads of glass or plastic to carry very large amounts of information in the form of light signals (merriam-webster.com)

**Optics** – the science that studies light and the way it affects and is affected by other things (merriam-webster.com)

**Signals** - a detectable physical quantity or impulse (as a voltage, current, or magnetic field strength) by which messages or information can be transmitted (merriam-webster.com)

**System** - a group of related parts that move or work together (merriam-webster.com)
